ABSTRACT OF DISCLOSURE

A novel Internet-based consumer product information system method for use in retail shopping environments, wherein each Web-enabled bar code driven product information consumer kiosk deployed therewithin embodies e-mail messaging capabilities which enable consumers t o automatically save and record the URLs of CPI-related Web documents within the message field of a preformatted e-mail message that is transmitted from a retailer-operated e-mail server, to a remote e-mail address specified by the consumer within the retail shopping environment. One or more central e-mail servers are used to collect copies of e-mail documents (and records thereof) transmitted from the Web/e-mail enabled kiosks within each retail shopping for and demographic environments, consumer information analysis, compilation, and storage within RDBMSs that are made accessible to retailers and manufacturers alike for use in product marketing, sales forecasting, intelligence, and like operations which enable customer more effective marketing of consumer products and services in both physical and electronic forms of commerce.
